DIRECCION

CENICAFE, Chinchiná, Caldas, Colombia

ADDRESS

La información de este Anuario fue compilada por los investigadores de CENICAFE Orlando Guzmán Martínez y José Vicente Baldión Rincón con la participación del personal auxiliar de la Disciplina de Agroclimatología, señores Edilberto Taborda Márquez, Carlos Roldán Osorio, Raúl Castaño García, Fabián Sánchez López, Luis F. Torres Quintero, John J. Ramírez Gaviria y Wilmar A. Rendón Gómez. Además, contó con la asesoría del doctor Michel Prieto Trujillo y el Programador Carlos H. Gallego Zapata de la Disciplina de Sistemas y la colaboración de la Sección de Divulgación. Igualmente se reconoce la valiosa cooperación de los Comités Departamentales de Cafeteros a través de sus Servicios de Extensión y de los observadores en cada una de las estaciones de la red.

INTRODUCCION

Los registros climáticos reunidos en la presente edición de este Anuario Meteorológico corresponden a las observaciones meteorológicas obtenidas durante el año de 1992 en la red de estaciones que posee la Federación Nacional de Cafeteros a lo largo y ancho de la zona cafetera colombiana.

Esta información proviene de:

- a) Estaciones climáticas principales dotadas con instrumental que mide temperatura, humedad relativa, lluvia y número de horas de brillo solar.
- b) Estaciones heliopluiográficas las cuales suministran datos de lluvia y número de horas de brillo solar.
- c) Estaciones pluviográficas provistas de un registrador de lluvias el cual permite conocer la cantidad y la intensidad de éstas.
- d) Estaciones pluviométricas basadas en un pluviómetro para registrar la cantidad de lluvia caída.

En la obtención de la información se utilizó el siguiente equipo: termómetro de mercurio con estrangulamiento para la temperatura máxima, termómetro de alcohol para la temperatura mínima, psicrómetro normal con aspirador, termohigrógrafo con sensores bimetálico y de cabellos para la temperatura y humedad respectivamente, pluviógrafo tipo Hellman, pluviómetro con regilla de 200 cm² de boca colectora y heliógrafo tipo Campbell-Stokes.

El horario de observaciones está de acuerdo con las recomendaciones de la Organización Meteorológica Mundial -OMM- y comprende tres lecturas diarias de los diferentes elementos a las 07:00, 13:00 y 19:00 horas (hora local) contando además con datos continuos en los instrumentos registradores.

La recopilación, verificación y depuración de la información procedente de las distintas estaciones se adelanta en la estación central de CENICAFE localizada en el Centro Nacional de Investigaciones de Café (CENICAFE).

CALCULOS

Los valores de humedad relativa para cada término de observación se obtuvieron utilizando las lecturas del psicrómetro (termómetro seco y termómetro húmedo) y las tablas psicrométricas (tablas de tensión del vapor saturante), estas últimas calculadas con la fórmula empírica siguiente:

$$e = E_1 - A_p (t - t_1)$$

donde:

- e = tensión del vapor actual en milibares
- E₁ = tensión del vapor de saturación a la temperatura t₁
- A_p = constante psicrométrica (en función del aparato y de la presión atmosférica)
- t = temperatura del termómetro seco en °C
- t₁ = temperatura del termómetro húmedo en °C

La humedad relativa (HR) se estima con la fórmula:

$$HR = \frac{e}{E} \times 100$$

donde:

E = tensión del vapor de saturación a la temperatura del termómetro seco (t)

Los valores medios diarios de la humedad relativa (HR) corresponden a la media aritmética de las tres observaciones así:

$$HR = \frac{07:00 + 13:00 + 19:00}{3}$$

La temperatura media diaria (T) se calcula según el promedio aritmético:

$$T = \frac{07:00 + 13:00 + 19:00 + 19:00}{4}$$

Las medidas mensuales y anuales de las dos variables anteriores, así como también las de las temperaturas máxima y mínima, se calculan con base en los valores diarios correspondientes.

Las temperaturas máxima y mínima absolutas se refieren al mayor y menor valor observados durante el día de 07:00 a 19:00 horas y de 19:00 a 07:00 horas durante la noche, respectivamente.

La lluvia en las estaciones climatológicas principales, heliopluiográficas y pluviográficas está organizada de la siguiente manera:

Lluvia diurna = total registrado desde las 07:00 hasta las 19:00 horas.

Lluvia nocturna = total acumulado desde las 19:00 hasta las 07:00 horas del día siguiente.

Total diario = corresponde a la suma de los valores del día y de la noche.

Cuando aparece solamente la columna del total diario, ello indica que el dato proviene del pluviómetro.

El número de días lluviosos es la suma total de aquellos días que presentaron una lluvia igual o superior a 0.1 mm.

El brillo solar es la suma diaria, mensual o anual del número de horas con sol registradas en el heliógrafo.

MODIFICACIONES EN LA RED DEL SERVICIO METEOROLOGICO

Las novedades registradas durante el año de 1992 en relación con la red meteorológica fueron las siguientes:

Cambios de categoría

La estación pluviográfica Santa Rosita ubicada en el municipio de El Peñón (Cundinamarca) pasó a la categoría de principal en el mes de junio.

Estaciones nuevas

Se instaló la estación climatológica principal San Antonio en el municipio de Floridablanca (Santander) en el mes de agosto.

Se instaló la estación pluviográfica La Elvira en el municipio de Belén de Umbría (Risaralda) en octubre.

Puestos pluviométricos nuevos

Departamento	Municipio	Nombre
Antioquia	Cocorná	La Aldea (febrero)
Caldas	Chinchiná	La Divisa (mayo)
Caldas	Chinchiná	Los Pomos (febrero)
Tolima	Ortega	El Recreo (enero/91)

Estaciones suspendidas

Departamento	Municipio	Nombre
Risaralda	Belén de Umbría	La Delfita (octubre)
Quindío	Calarcá	El Jardín (febrero)

LOCALIZACION DE LA RED METEOROLOGICA

La Federación Nacional de Cafeteros de Colombia (FEDERACAFE) realizó el estudio "Ecotopos Cafeteros de Colombia"¹, entendiéndose como Ecotopo Cafetero una región agroecológica delimitada geográficamente teniendo en cuenta las condiciones predominantes de clima, suelo y relieve en donde se obtiene una respuesta biológica similar del cultivo del café. Una de las actividades allí adelantadas consistió en verificar en el campo la ubicación de las estaciones meteorológicas de acuerdo con las planchas de escala 1:100.000 del Instituto Geográfico "Agustín Codazzi" (IGAC). Con base en esta cartografía se revisaron algunos aspectos geográficos tales como la latitud, longitud y corriente o río más cercano. Estas modificaciones que aparecen en el Anuario, no implican de manera alguna que se trate de una nueva estación sino que solamente se ha precisado mejor su ubicación. Así mismo, como en el estudio citado el cubrimiento geográfico de la zona cafetera se hace de norte a sur por cordilleras (1, Occidental; 2, Central; 3, Oriental y 4, Sierra Nevada de Santa Marta) y vertientes (A, occidental, B, oriental) se ha considerado conveniente presentar la relación de estaciones en la misma forma para asociarlas con el ecotopo cafetero respectivo. Así por ejemplo, la estación Naranjal situada en la Cordillera Central (2), vertiente occidental (A) y número de orden 06 de norte a sur, se identifica como correspondiente al ecotopo 206A.
