# Mapa de “Galaxia”: estructura científica mundial

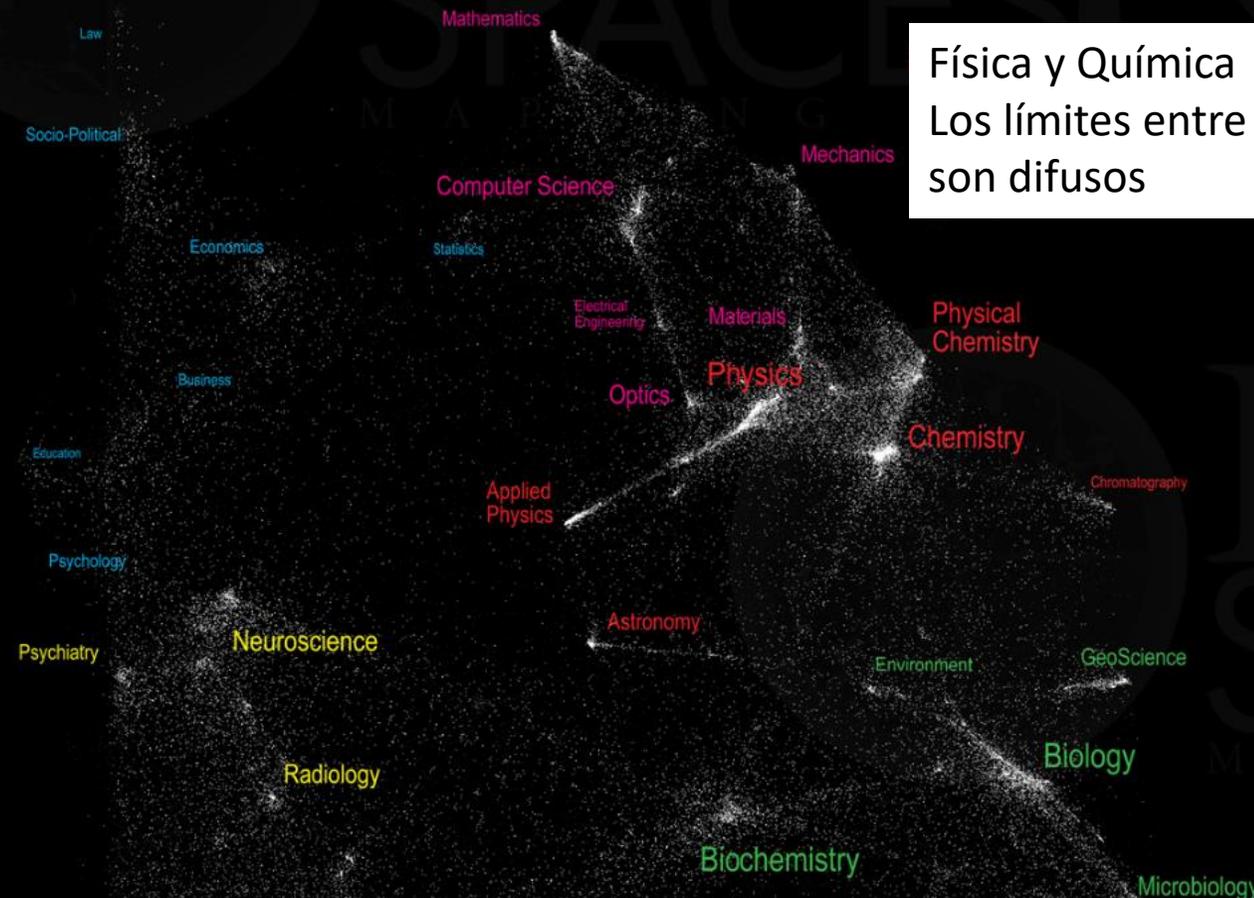

- Nivel Macro- Tipo red social
- Kevin Boyack
- Creado a partir de patrones de citación de 800.000 artículos científicos
- Cada punto representa una de 96.000 comunidades científicas detectadas

# The Structure of Science

Ciencias sociales es la mas pequeña

1 **Mathematics** is our starting point, the purest of all sciences. It lies at the outer edge of the map. **Computer Science**, **Electrical Engineering**, and **Optics** are applied sciences that draw upon knowledge in Mathematics and Physics. These three disciplines provide a good example of a linear progression from one pure science (Mathematics) to another (Physics) through multiple disciplines. Although applied, these disciplines are highly concentrated with distinct bands of research communities that link them. Bands indicate interdisciplinary research.

Física y Química  
Los límites entre ellas  
son difusos

We are all familiar with traditional maps that show the relationships between countries, provinces, states, and cities. Similar relationships exist between the various disciplines and research topics in science. This allows us to map the structure of science.

One of the first maps of science was developed at the Institute for Scientific Information over 30 years ago. It identified 41 areas of science from the citation patterns in 17,000 scientific papers. That early map was intriguing, but it didn't cover enough of science to accurately define its structure.

Things are different today. We have enormous computing power and advanced visualization software that make mapping of the structure of science possible. This galaxy-like map of science (left) was generated at Sandia National Laboratories using an advanced graph layout routine (VxOrd) from the citation patterns in 800,000 scientific papers published in 2002. Each dot in the galaxy represents one of the 96,000 research communities active in science in 2002. A research community is a group of papers (9 on average) that are written on the same research topic in a given year. Over time, communities can be born, continue, split, merge, or die.

The map of science can be used as a tool for science strategy. This is the terrain in which organizations and institutions locate their scientific capabilities. Additional information about the scientific and economic impact of each research community allows policy makers to decide which areas to explore, exploit, abandon, or ignore.

We also envision the map as an educational tool. For children, the theoretical relationship between areas of science can be replaced with a concrete map showing how math, physics, chemistry, biology and social studies interact. For advanced students, areas of interest can be located and neighboring areas can be explored.

## Nanotechnology

Most research communities in nanotechnology are concentrated in **Physics**, **Chemistry**, and **Materials Science**. However, many disciplines in the Life and Medical Sciences also have nanotechnology applications.

## Proteomics

Research communities in proteomics are centered in **Biochemistry**. In addition, there is a heavy focus in the tools section of chemistry, such as **Chromatography**. The balance of the proteomics communities are widely dispersed among

# Colaboración científica entre ciudades del mundo

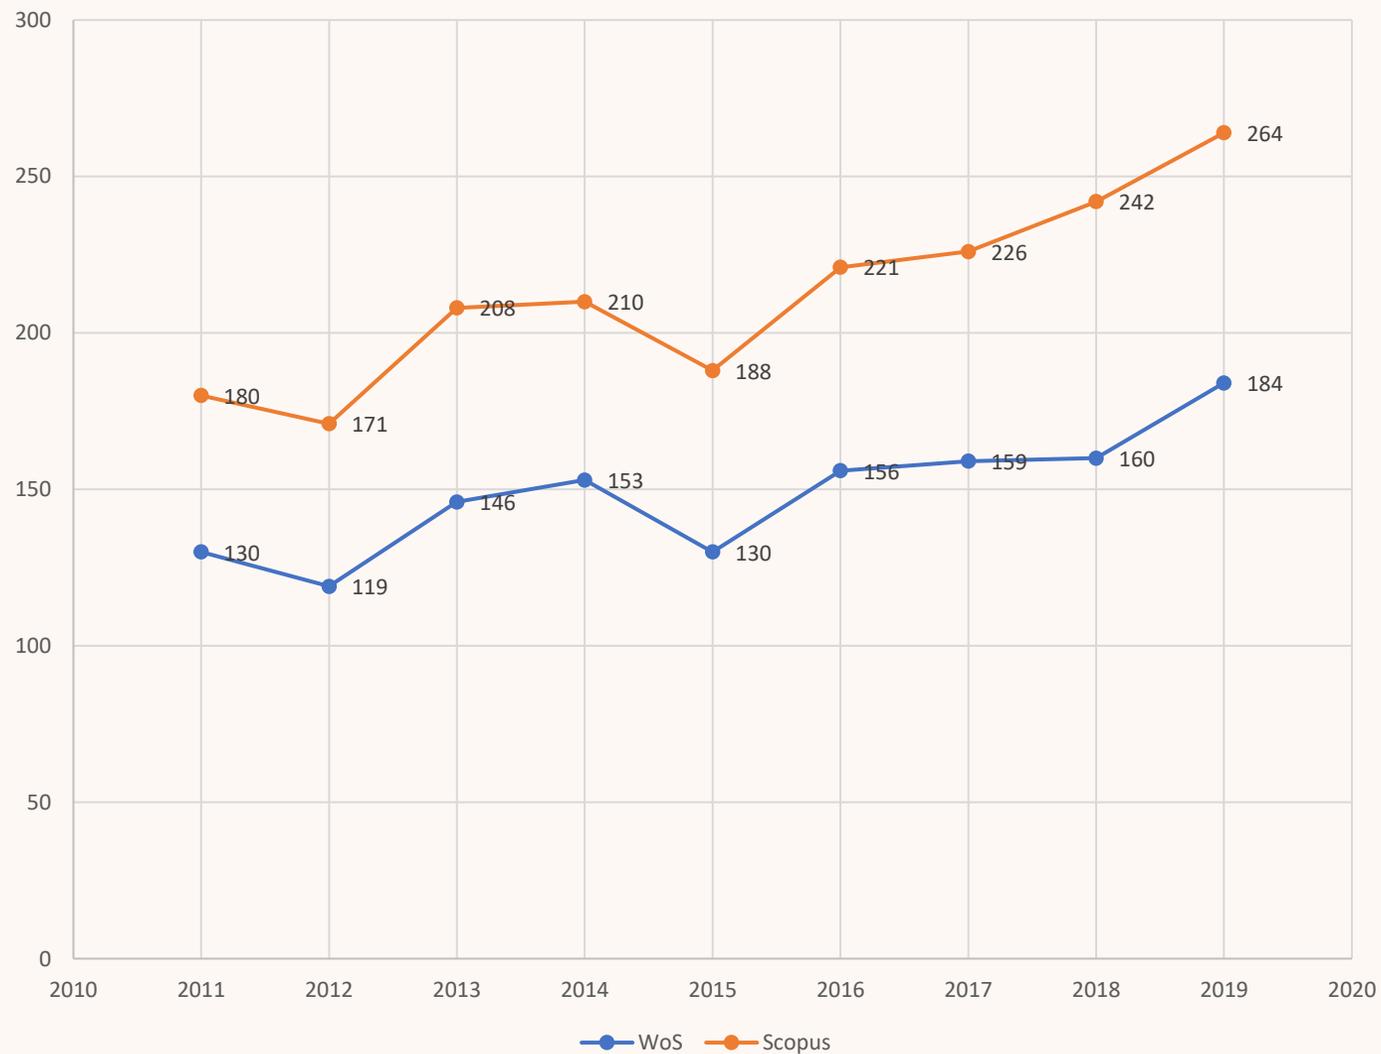

- Oliver H Beauchesne
- Flujo localizado de investigación a partir de Elsevier Scopus (4.000.000 de registros).
- Se construye a partir de la distancia geodésica (distancia mas corta) entre el origen geográfico de autores de artículos.

# Comparativo entre WoS y Scopus “coffea arabica”

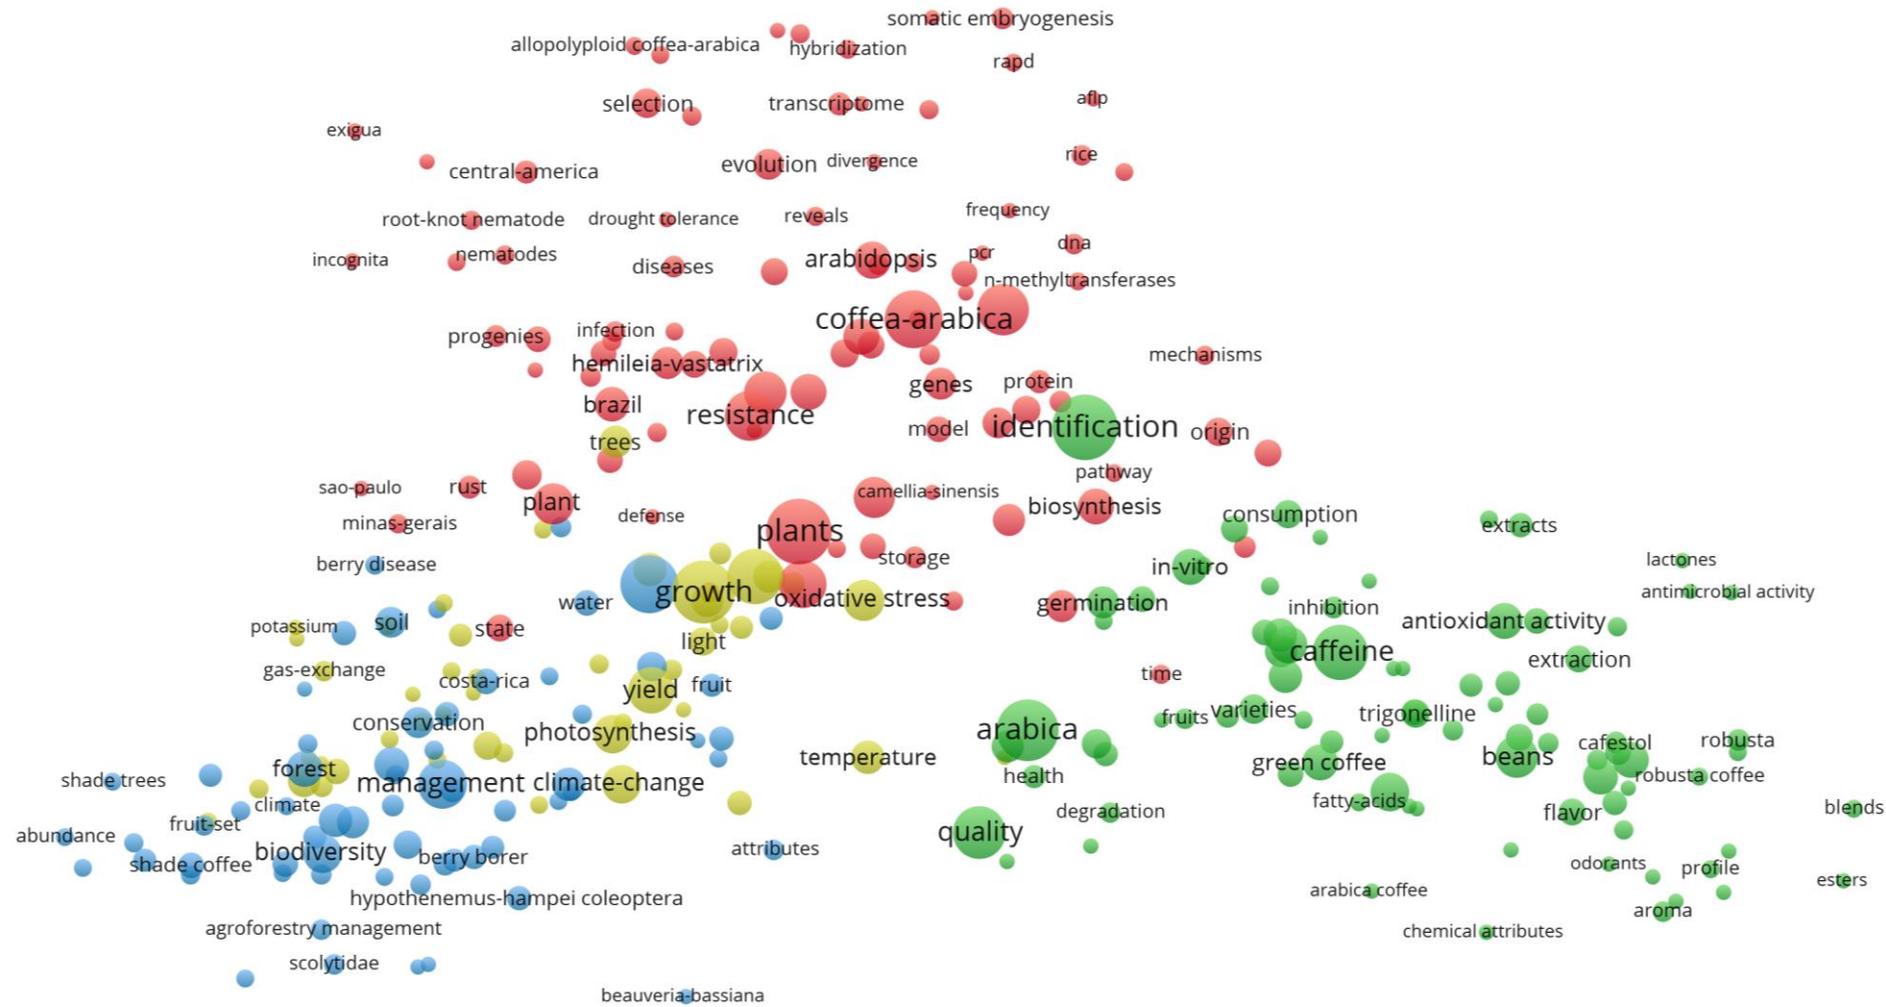

Tendencia de volumen de artículos de Coffea Arabica WoS y Scopus

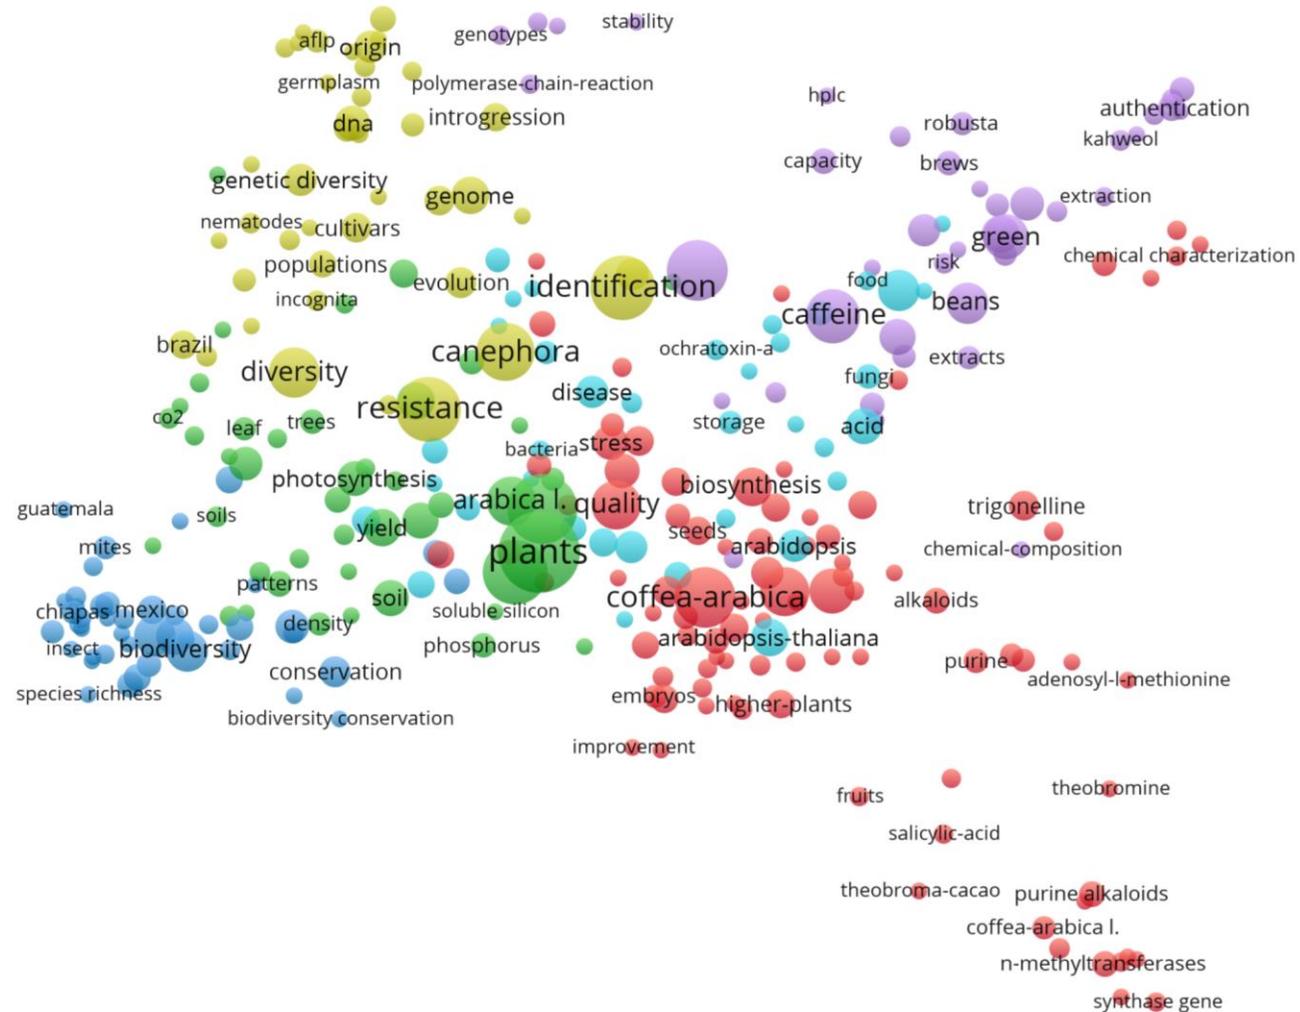

# 2000 artículos WoS

- Nivel Meso (2000)
- Tipo: Red Social
- Mapa de Tópicos
- ¿Cuáles son los frentes de investigación dentro WoS?
- ¿En que cuadrante de esta panorama mundial se ubica la producción de CENICAFÉ?

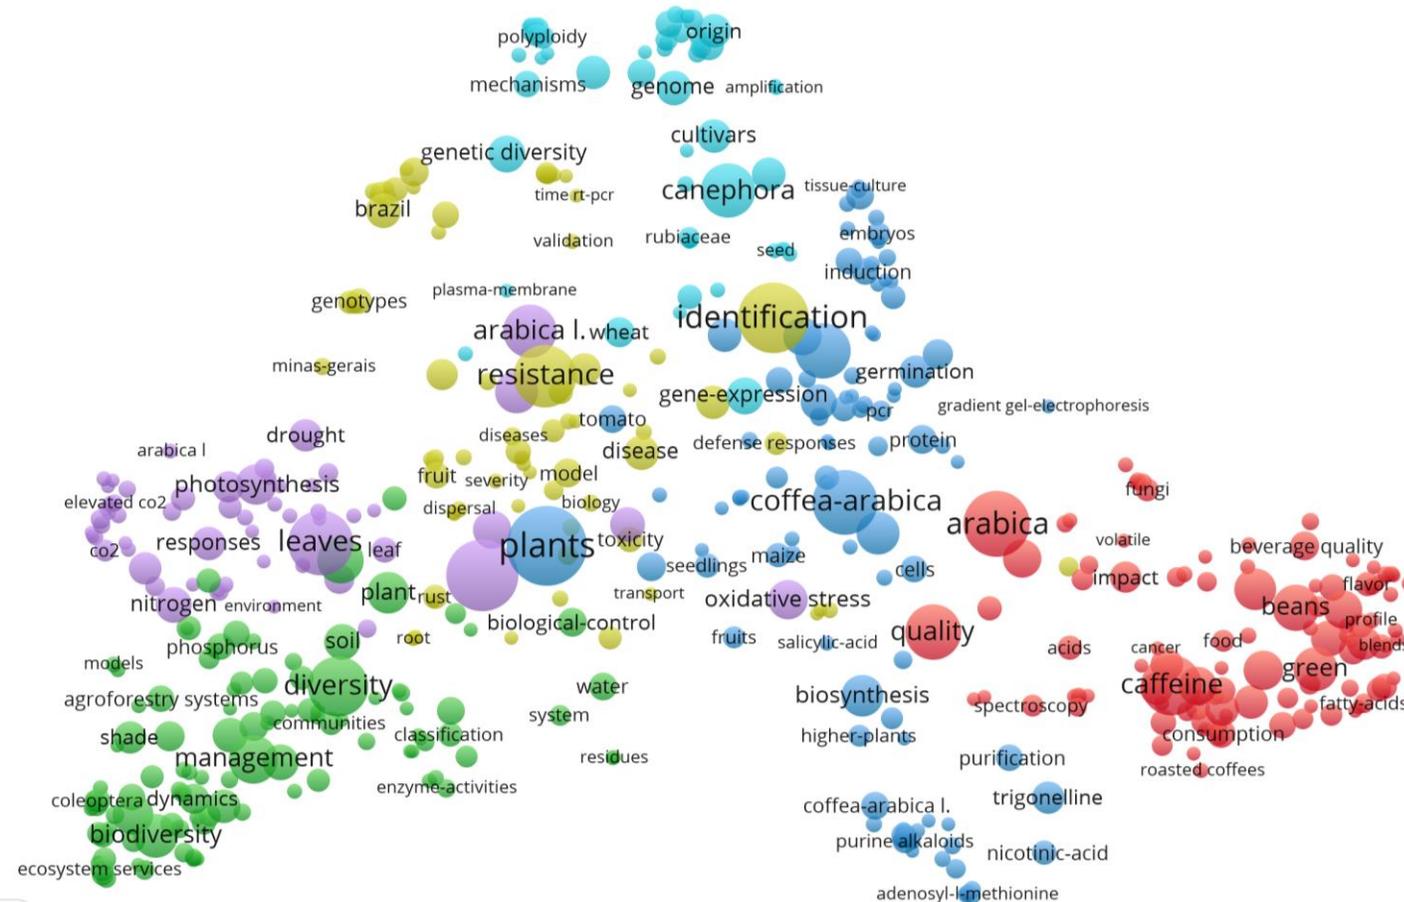

# Tópicos de investigación WoS 2015-2019

# Tópicos de investigación WoS 2010-2014
